Outstanding conveyor systems from AMF-Bruns

www.amf-bruns.com

Certified to DIN EN 1090-2 and ISO 3834:

We manufacture the most demanding industrial plant thanks to our qualified experts

For more than 55 years, the name AMF-Bruns has stood for a strong partner, who flexibly responds to its customers' requests with modern technology and good technical skills. We have implemented large, international contracts with high technical requirements, on time and with the right quality.

Apart from our very well trained specialists at all stages in the manufacturing process, our qualified welding technicians, welding specialists and

"We look forward to having the certification of our high quality standards once again being officially confirmed."

Uwe Bokelmann
Quality management officer for conveyor systems. Manager of in-house production inspection department

Certified welder

welding engineers guarantee a high manufacturing quality and the correct execution of your orders. Particularly in the metalworking industries, welding is among the most significant manufacturing technologies.

With the DIN EN 1090-2 and ISO 3834 certificates as well as our approval to AD 2000/HP 0 of the pressure equipment directive, we can prove both the qualifications of our employees as well as the availability of the necessary technical equipment. Over and above that, the introduction of our in-house production inspection system into our already

existing quality management system ensures that all of our manufacturing processes are fully documented. We can ensure that the production characteristics correspond to all relevant technical specifications and are permanently ensured in our

manufacturing processes. This requires qualified, skilled personnel with up-to-date knowledge. Our staff regularly attend training courses, to extend their knowledge and to keep it up to date.

Extract from the applicable welding process test

No.	Welding process	Material	Type of weld seam
VP 1	135	S 355	Butt weld (BW)
VP 2	135	S 355	Fillet weld (FW), single layer
VP 3	135	S 355	Fillet weld (FW), multiple layer
VP 4	141	1.4571	Butt weld (BW)
VP 5	141	1.4571	Fillet weld (FW), single layer
VP 6	141	1.4571	Fillet weld (FW), multiple layer
VP 7	135	S 355	Cross tensile test
9951	Flame straightening	S 355	Flame-straightened metal sheet

At AMF-Bruns the best welding process is used for the various material groups with certified welders. Welding processes such as tungsten inert gas (TIG) welding, gas metal arc welding (MIG) / metal active gas (MAG) and manual metal arc (MMA) welding are used. The operational suitability has been verified in welding

process tests to DIN EN ISO 15614-1, the pressure equipment directive (PED) as well as AD 2000 code technical rules for pressure vessels HP 2/1, working together with TÜV Nord. We also have a current re-stamping certificate to the PED and AD 2000 code technical rules.

Certified to DIN EN ISO 9001:

Excellent quality management in the field of conveyor systems

Highest manufacturing standards and products in best quality: That is not just what our customers expect from us, it is what we expect from ourselves. That is why AMF-Bruns has a quality management system, which covers the entire design and manufacturing process and which follows the internationally recognised DIN EN ISO 9001 standard.

When certified to the internationally recognised

DIN EN ISO 9001 standard, companies can prove that they have an effective quality management system and that their internal, operational processes are well organised. In 2014 an audit by external consultants in the field of conveyor systems confirmed that AMF-Bruns complies with the high requirements in DIN ISO 9001.

A completely assembled AMF-Bruns trough screw conveyor

Final assembly of an AMF-Bruns trough screw conveyor

This audit was carried out by the independent test company ZDH-ZERT GmbH with headquarters in Bonn, Germany. The welcome result: In the area of conveyor systems, AMF-Bruns' quality management system complies with the DIN standard.

We are very pleased about the successful certification which once again confirms our claims to quality and at the same time shows our customers that products from AMF-Bruns meet the highest requirements on quality and functionality in every respect.

AMF-Bruns wins award from the Demography Agency for Lower Saxony:

Well prepared for the demographic change!

As one of the first companies in Lower Saxony, AMF-Bruns has been awarded the new certificate “Demographically sound. A social partner company.” by the Demography Agency for Lower Saxony.

The certificate was presented as part of the demography festival on 8 June 2015 by the minister for agriculture, Olaf Lies, in Hanover’s old town hall.

This certificate is confirmation that AMF-Bruns is proactively addressing the challenges of the demographic change and has already initiated a series of different measures. The aim of these measures is to be ready for the future by being well prepared in the competition for the best young talent while at the same time retaining qualified staff for the long term.

At AMF-Bruns this includes, for example, the introduction of a holistically oriented health management system, which if nothing else is also of benefit to older experts. But also attractive training opportunities and arrangements to better combine work and family life, for example via flexible working hours, are part of the extensive package of measures which is continually being expanded. However, the new certificate is not just recognition of what has previously been achieved.

Together with the Demographic Agency for Lower Saxony, during the certification, an agreement on objectives was developed to continuously develop the demographic soundness at AMF-Bruns. This meant, for example a new design for the workplaces in the administration area as well as the optimisation of the internal management of knowledge.

Jan Woltermann, general manager at AMF-Bruns was happy to report “The certificate showed us that we are heading in the right direction with our measures.” He then added “It also helps that relations to our employees are characterised by trust and by a team spirit. This is an important factor when we try to employ new specialists and and bind them to the company.”

The Demographic Agency which issues the certificates is supported by Lower Saxony’s regional government, by the metalworking employer’s association for Lower Saxony as well as the German federation of trade unions.

Creditreform’s solvency certificate for AMF-Bruns:

A sign of economic stability

Creditreform Oldenburg Bolte KG has now awarded AMF-Bruns GmbH & Co. KG their solvency certificate (CrefoZert) several times consecutively. In this way, they certify that our company’s solvency is excellent. At the same time this confirms that AMF-Bruns stands for economic stability as well as for a top level of security and service.

This certificate is based on the analysis of our annual accounts by Creditreform Rating AG, a subsidiary of Creditreform AG certified by BaFin, the German Federal Financial Supervisory Authority. The data from the current credit report is also considered as well as the analysis of the current situation and the future perspective for the company which is determined during a personal interview. AMF-Bruns GmbH & Co. KG fulfils all of these criteria particularly well.

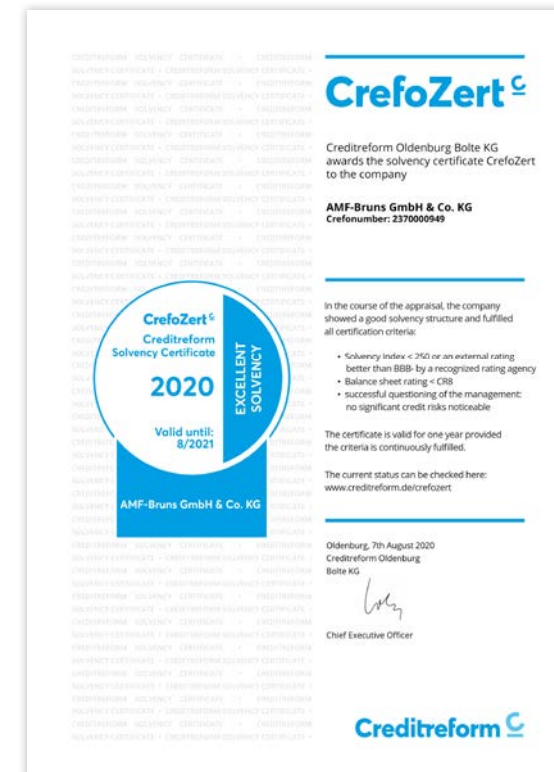

We are very pleased about the successful certification as it clearly shows our business partners that AMF-Bruns is well set up in all respects for the challenges of the future.

Energy management system to DIN EN ISO 50001:

Sustainable approach to the use of energy

The protection of our environment and climate are important to AMF-Bruns. This is why we consider all of the factors which are relevant to the environment for all of the processes in our company.

The result is consistent management of resources which contributes to saving natural resources and to the protection of the environment. We achieve this by all of our staff using energy responsibly. Individuals suggesting their own ideas to save resources makes a contribution here. The continuous checking and further development of plant which consumes energy as well as the regular checks of

company procedures are important factors. Since 2013 we have thus only used hydroelectric power.

The introduction of an energy management system (EnMS) to DIN EN ISO 50001 will create a systematic approach to improving our energy efficiency. Annual, external audits ensure that the standards for energy are continuously improved. Well documented processes and clear responsibilities help to reliably control complicated procedures. Once the standards are documented it also becomes easier to concentrate on new tasks and to continuously optimise the processes.

So that sustainability becomes an every-day part of our company's culture, we always invite our staff to actively integrate the protection of the environment and resources in their daily work. New ideas should thus make the working processes at AMF-Bruns save even more resources, for a future that is worth living, in an intact environment.

Given an award for a family-aware company culture:

Because family is the most valuable

For many years AMF-Bruns has been committed to the well-being of its employees, taking numerous measures towards that, for as a company run by its owner, the family is of particular importance.

All the more as it matters to us, that our employees can strike a balance between their professional commitments and the needs of their family. This applies particularly for those phases in life in which our employees have to bear more responsibility than usual for their family. Whether this is for reasons of illness, if someone needs nursing care or even if our employee would just like to take a longer break.

About **330** employees
profit from our family-aware company culture

With the introduction of flexible working hours, part-time work and concepts for parental leave, we have already started various initiatives for more family-friendly working. We would however like to do even more and have thus successfully participated in the “work and family” audit organised by the charitable Hertie foundation.

The corresponding certificate is a recognised seal of approval for family-aware personnel policies and it acknowledges the measures which we have already implemented. At the same time however, it also stands for the obligation, in future to always create better, more transparent and reliable conditions, so as to bring career and family into harmony with one another.

On 26 June 2013 in Berlin, General Manager Jan Woltermann (back row, 2nd from the left) received the award from the charitable Hertie foundation

Engagiert sich für familienbewusste Unternehmenskultur: die AMF-Bruns „Beruf und Familie“-Projektgruppe

This is why we have brought a project group into being, made up of the general management, the works council and the work force. It develops joint solutions with which AMF-Bruns can make an even larger contribution to the reconciliation of work and family life.

We are very happy about the award of the certificate which we above all understand as motivation to be even better in future. With that we would like to contribute to a working world where career and family are no longer seen as contradictions, but where employee's individual needs go hand in hand with the interests of the company.

The successful use of the “work and family” audit is the prerequisite for the certificate which is

freshly awarded every three years.

For the second time, on 23 June 2016 in Berlin, AMF-Bruns GmbH & Co. KG was awarded a certificate for the “work and family” audit for its personnel policies which are particularly oriented towards the family and phase of life.
